

I am against cell phone use on aircrafts. "I can't hear what the flight attendant is saying to do in this emergency situation, because the person next to me is telling the news media what's going on, on his cell phone." (Just one example)

There is no hard evidence that cell phone use doesn't interfere with navigational instruments.

- Cell phone use would enable terrorists to coordinate a plan of action more effectively.

- The NPRM would leave it up to flight attendants to police the use of cell phones onboard the aircraft compromising our ability to maintain a safe, secure cabin environment and to conduct emergency evacuations.

- It would make an already tense cabin environment even more stressful.

- * In case of an impact, could you see the cell phones flying through the air like bullets, hitting people in the head and causing more injuries?

- * A lot of people like to sleep on planes, this would be hard to do. The noise would be impossible.

Please do not allow this to happen.

It's bad enough now with people chatting waiting to taxi.
